

## Environmental Policy

High Voltage Power Systems Limited acknowledges its responsibility to, and the commercial advantages of, maintaining a sound environment within its scope of delivering a range of High and Low Voltage electrical installations and maintenance on customer owned networks covering the South of England. High Voltage Power Systems holds ISO 14001 accreditation.

We recognise the importance of the impact of our activities on the environment and that there is a need to constantly consider ways in which we can conserve energy and minimise waste in all activities that we undertake. The environmental policy is defined by the Management of the organisation and provides the framework for setting and reviewing environmental objectives and targets.

High Voltage Power Systems Limited actively acknowledges our responsibility to protecting the environment in all areas of our work, from the projects out on site, to our actions within the office. In pursuit of these goals, we will seek continuous improvement by implementing the following principles:

- Systematically identify the nature, scale and environmental impacts and eliminate, reduce, or control impacts to environmental receptors.
- Identify and agree with our customers, employers and visiting contractors the environmental aspects of our activities and aim to meet or exceed legislative and best practise requirements.
- Comply with relevant environmental legislation and guidance, High Voltage Power Systems policy and other corporate and industry best practise initiatives to which High Voltage Power Systems subscribes.
- Develop and promote policies and procedures that minimise the environmental impacts that our activities have upon the environment, prevent pollution and deal with emergencies efficiently and effectively.
- To regularly review legislation and new best practise developments and ensure that where appropriate these are incorporated into existing management practises and procedure.
- Provide appropriate training on relevant products and activities.
- Communicate internally and externally our policies, procedures, and performance where appropriate to all interested parties.
- To build the highest possible standards of environmental best practice

Implementation of this policy is a line management responsibility at all levels together with participation of all personnel.

The policy will be revised and updated as necessary at a frequency of no less than annually.
